# **NumPy Exercises**

Now that we've learned about NumPy let's test your knowledge. We'll start off with a few simple tasks, and then you'll be asked some more complicated questions.

#### Import NumPy as np

```
In [2]: !pip install numpy
import numpy as np
```

Requirement already satisfied: numpy in d:\python anaconda\lib\site-packages (1. 24.3)

#### Create an array of 10 zeros

```
In [5]: a=np.zeros(10)
a
Out[5]: array([0., 0., 0., 0., 0., 0., 0., 0.])
```

## Create an array of 10 ones

```
In [6]: a=np.ones(10)
a
Out[6]: array([1., 1., 1., 1., 1., 1., 1., 1.])
```

## Create an array of 10 fives

```
In [7]: np.repeat(5.,10)
Out[7]: array([5., 5., 5., 5., 5., 5., 5., 5., 5.])
```

#### Create an array of the integers from 10 to 50

#### Create an array of all the even integers from 10 to 50

# Create a 3x3 matrix with values ranging from 0 to 8

```
b=np.arange(0,9,1).reshape(3,3)
b
```

05/09/2023, 12:24 Numpy Exercise

```
Out[10]: array([[0, 1, 2], [3, 4, 5], [6, 7, 8]])
```

#### Create a 3x3 identity matrix

#### Use NumPy to generate a random number between 0 and 1

```
In [25]: b=np.random.rand()
b
Out[25]: 0.7120307135459538
```

# Use NumPy to generate an array of 25 random numbers sampled from a standard normal distribution

#### Create the following matrix:

## Create an array of 20 linearly spaced points between 0 and 1:

# **Numpy Indexing and Selection**

05/09/2023, 12:24 Numpy Exercise

Now you will be given a few matrices, and be asked to replicate the resulting matrix outputs:

```
mat = np.arange(1,26).reshape(5,5)
In [15]:
         array([[ 1, 2, 3, 4, 5],
Out[15]:
                [6, 7, 8, 9, 10],
                [11, 12, 13, 14, 15],
                [16, 17, 18, 19, 20],
                [21, 22, 23, 24, 25]])
        # WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
In [16]:
         # BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
         # BE ABLE TO SEE THE OUTPUT ANY MORE
In [17]: mat[2:6,1:6]
        array([[12, 13, 14, 15],
Out[17]:
                [17, 18, 19, 20],
                [22, 23, 24, 25]])
In [0]: # WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
         # BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
         # BE ABLE TO SEE THE OUTPUT ANY MORE
In [19]: mat[3,4]
         20
Out[19]:
In [0]: # WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
         # BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
         # BE ABLE TO SEE THE OUTPUT ANY MORE
In [18]: mat[0:3,1:2]
         array([[ 2],
Out[18]:
                [7],
                [12]])
In [0]: # WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
         # BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
         # BE ABLE TO SEE THE OUTPUT ANY MORE
In [19]: mat[4:]
        array([[21, 22, 23, 24, 25]])
Out[19]:
In [0]: # WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
         # BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
         # BE ABLE TO SEE THE OUTPUT ANY MORE
In [21]: mat[3:6,0:6]
         array([[16, 17, 18, 19, 20],
Out[21]:
                [21, 22, 23, 24, 25]])
```

# Now do the following

05/09/2023, 12:24 Numpy Exercise

#### Get the sum of all the values in mat

```
In [24]: s=np.sum(mat)
s
Out[24]: 325
```

#### Get the standard deviation of the values in mat

```
In [22]: sd=np.std(mat) sd
Out[22]: 7.211102550927978
```

#### Get the sum of all the columns in mat

```
In [23]: colsum=np.sum(mat,axis=0) colsum

Out[23]: array([55, 60, 65, 70, 75])
```
